CTO / Principal Software Architect

Ms. Laura Kim
VP of Engineering, Northwind Logistics
Amsterdam, Netherlands

23 November 2026

Dear Ms. Kim,

Northwind is moving its dispatch platform to the cloud while volume doubles every year. I have spent the last four years doing exactly that for a SaaS trucking platform, and I would like to do it for your team as Head of Platform Engineering.

At 3MD I co-founded the platform and designed its architecture. It now handles 500 requests per second at 200 ms p95. When the Azure bill grew faster than revenue, I collapsed 14 microservices into a modular monolith and cut the bill by 30%. Deployments went from two days to 45 minutes once we automated CI/CD.

Before that, at Zühlke, I grew a cloud practice from 6 to 28 engineers and kept 95% of them. Three became principals. I care about that number as much as the uptime numbers, because the team is what keeps the system running after I stop looking at it.

Your job post mentions reliability targets and a team that is about to triple. I have hired, coached and promoted engineers through that kind of growth, and I would welcome a conversation about how I could help.

Thank you for your time.

Sincerely,

Dr. Milan Milanović
